

**The LYNX Enterprise Secure Digital Management Software is designed to handle the toughest digital photo, video and digital audio needs for construction projects. It creates and manages a secure, searchable, high-speed, archived database!**

- **Acquire images from any camera, local/network drive, CD, DVD, etc.:**
  - LYNX authenticates images as they are acquired. This allows you to easily prove your images have not been modified or altered from your digital camera to our database. Once in LYNX all data is then stored into ONE 256 bit encrypted database.
  - Imports all common photo formats
  - Imports audio annotation with photos if present
  - Import video & audio if needed (even PDF files)
- **User defined photo compression if desired:**
  - Original aspect ratio retained along with image quality
  - Default compression can reduce a 10mb image to just 1mb! Remember this does not change or alter the image resolution! (size). (This means you will get just as good a printout or view of the 1mb image as the 10mb image.)
- **QuickAcquire:**
  - Users can import images with just TWO mouse clicks and all images will include the original date/time, photographer, case, caption, notes, as well as, all user defined information such as: Detective, Division, Case Number, etc.
- **Quick Add:**
  - Create a new case in just one easy step. The new case gets created using “your” predefined case templates (ie. Uniforms, Highway, Special OPS, Investigations, etc.) Users with rights can create cases on the “fly”.
- **Organize and query images any way you want using unlimited search criteria.**
  - Annotate with unlimited search fields and values with a click of a mouse
  - Annotate each photo individually, in selected groups, or the entire batch with all the information you need.
  - Annotation data can be required and restricted to ensure you are getting the information you need on your data.
  - Search by date range, custom search fields, notes, captions, etc. (find whatever you want, however you want. Queries can be for a single project, selected projects, or all projects.
  - Save commonly used searches for later use
  - Boolean search criteria gives you the flexibility to get the exact results you need off a query.

- **Users and groups allow you to control who can access projects, and if access is granted what features are allowed.**
  - Create users and easily assign rights and projects to them.
  - Create a Group to easily manage multiple users.
  - Add users to a group with specific rights to save time and keep your staff organized and in control of whatever role they have within a case.
  - There is no limit to how many groups you wish to set up, and each group can have as many sub-groups as needed.
- **Photos can be quickly be exported to use in other third party applications:**
  - You want all images in one secure location; however, you may need to use them in other applications as well. LYNX makes it simple to export single, multiple, or all images from a case or multiple cases. (export/copy can be exact or resized copy of the original. You can even copy paste images to other applications from LYNX.
  - When exporting or copying images you can choose to resize, and even include redline layers (mark-ups)
- **Multiple projects can be open simultaneously:**
  - You can view thumbnails for multiple cases at the same time.
  - Thumbnails can be set to 3 different sizes with info on separate panel
  - When thumbnail is clicked full size photo is shown with annotation
- **Construction Photo Album (slide show)**
  - Create a slide show that can be emailed or burned to CD/DVD. This slide show runs in web browser so the recipient needs no software to view. Slide show can contain any information you choose.
  - Include redline layers to immediately draw attention to an area of a photo.
  - Include your company logo if desired
  - Run in a loop and adjust the speed to your preference. (also good for time lapse shows)
- **Automatically, securely send case images and data between locations.**
  - Case images and data can be automatically (manually if needed) synchronized .
  - Set schedule (hourly, daily, weekly, off peak times, etc.) to send or retrieve data. Data can be transferred via FTP, HTTP, VPN, LAN, etc.
- **IT friendly!**
  - Administrators can update server and then all workstations will update themselves as users log in.
- **Print photos including specific information needed**
  - Include red line layers
  - Include header and footer
  - Select or deselect information to be included

- **Visual Punchlist:**
  - Quickly mark-up images to show what items need to be addressed and save time, money, and jobsite trips by creating visual punchlists. These punchlists have the images and all the information needed to allow anyone to see exactly what needs to be done and when it needs to be completed by.
- **LYNX Enterprise web server (separate from LYNX Master)**
  - Takes all images from main LYNX master license and updates a web database by resizing the images so they can quickly load via the internet. Ideal for sharing images with project partners and company personnel.
  - User defined photo compression for web or intranet viewing
  - Securely share project photos across the internet
  - Search, view and print project photos from internet
  - Password protected user or group access rights
- **Annual support includes unlimited Toll Free M-F**
- **Annual supports include software upgrades including version changes**
- **Printable audit trail of all actions (print, view, export) is recorded.**
