

Secure Digital Photo Management

The LYNX Web Application

Secure

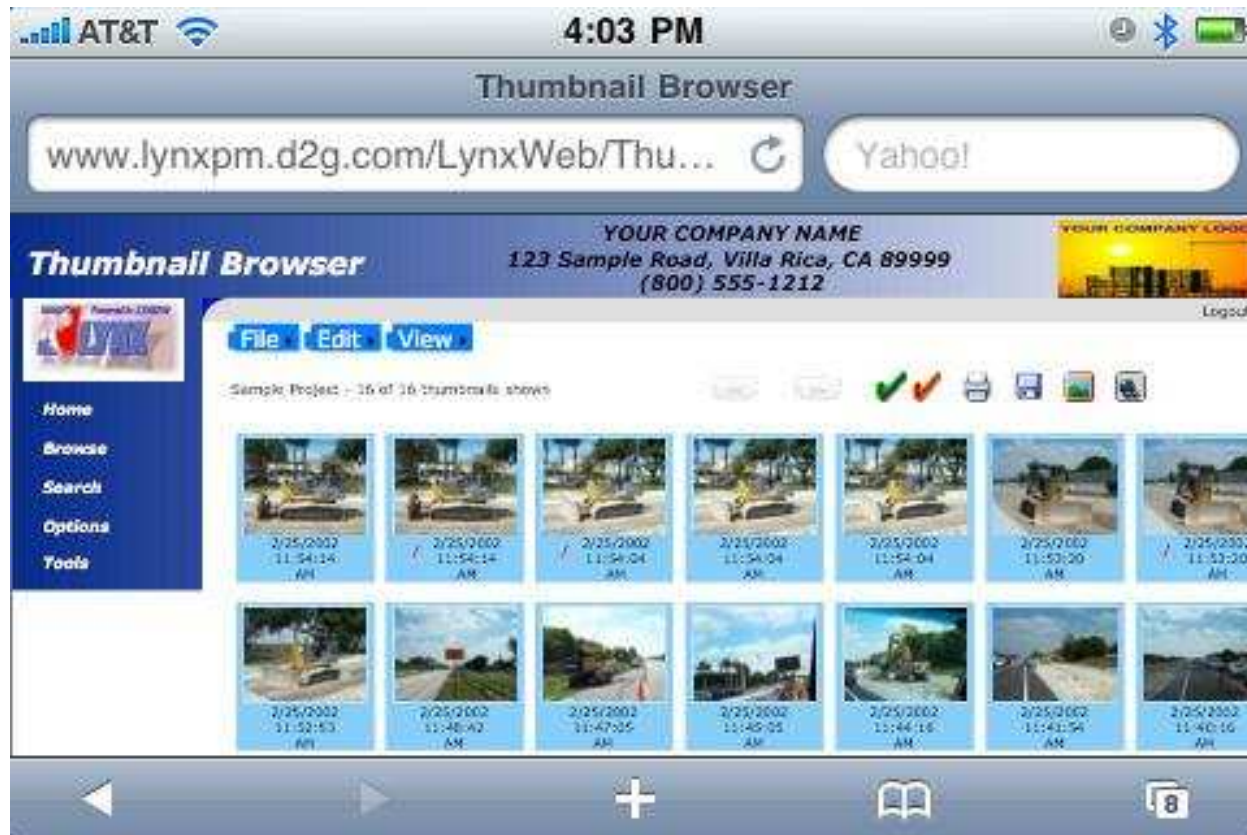

Searchable

Simple

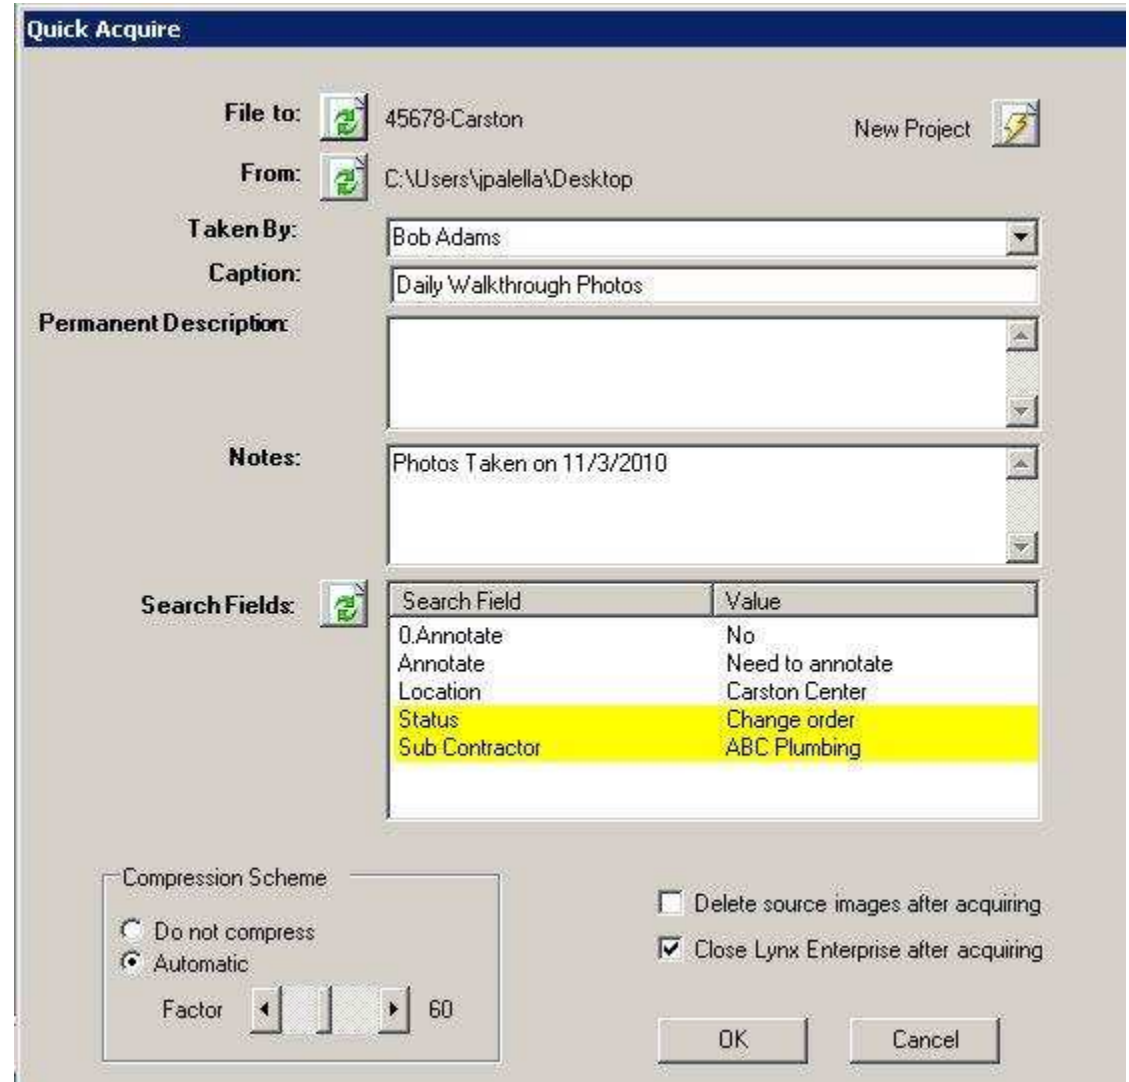

The LYNX Web Application makes uploading your digital images to a main, secure, database and communicating them fast and easy – all on the Internet.

Now you can visually walk your projects from any pc, mobile device – even your smart phone.

“Authorized Users” may log in to the LYNX Web Application utilizing the Quick Web Acquire Tool. This tool will compress the photos locally before uploading to the Web, saving thousands of hours and resources!

The Authorized User may change any or all criteria, if needed and pull photos directly from their camera or file folder into the secure database where they are now available on the Internet (in just 2 mouse clicks).

The screenshot shows a web browser window titled 'Lynx Enterprise - Browser - Windows Internet Explorer'. The address bar shows 'http://www.lynx...'. The page displays a grid of nine project photos, each with a timestamp and date. The photos show various stages of construction, including site clearing, grading, and foundation work. The browser interface includes a menu bar (File, Edit, View, Favorites, Tools, Help), a search bar, and a status bar at the bottom indicating 'Internet | Protected Mode: Off' and a zoom level of 100%.

From the LYNX Web Application, you may create hyperlinks.

There are three types of hyperlinks:

- Project Hyperlink**
- Dynamic Hyperlink**
- Static Hyperlink**

A project hyperlink (example above) is perfect for your Project Portal Page. Any third party software that accepts hyperlinks may be utilized. This link will pull up all of the project's photos. Now, you may search within this hyperlink for the exact photo/s you're looking for.

The screenshot shows a web browser interface for the Salt River Project. The header includes the project name, address (1600 North Priest, Phoenix, AZ 85281), and phone number ((800) 258-45RP (4777)). The browser title is 'Lynx Enterprise - Browser'. The main content area displays two sections: 'GGAW Water Facility - 4 of 4 thumbnails shown' and 'Acme Electric'. Each section contains four photo thumbnails with timestamps of '1/1/2001 12:00:00 AM'. The 'Acme Electric' section also features icons for print, save, and view.

Static Links are perfect for subcontractors, project partners, documents, daily field reports, any program, including E-mails, where you want people to view certain photos. They can now Print, Save (in different resolutions or the actual sized photo) and View each photo individually to see all attached information.

A Dynamic Link works the same as a static link, although this hyperlink grows and shrinks as photos are added or deleted from the project. This is perfect for someone who needs to see daily progress report photos, emergency situation photos and their resolutions, or as a daily progression walk through from any device that provides Internet - they'll continue to use the same hyperlink throughout the project to see progression.

Print out Punchlists right from the Internet! Show a subcontractor or project partner exactly what needs to be done and when it needs to be completed.

For speed, all photos are displayed in 640x480 resolution on the Internet. This allows for fast viewing. When it's time to save the photo/s, you have the option to include redline layers (if they've been added), you may choose to grab the original sized photo or you may choose different resolutions for different purposes.

Set up what features are enabled by utilizing the LYNX Users and Groups features right online.

This will determine which Authorized User/s may see which Authorized Project/s and what they can do with those photos. Users and Groups are easy to administer and will save you hours of time.

Project control has never been easier when it comes to your digital photos. Now, there's no excuse not to have all of the photos you need – when you need them. Walk your projects real-time using any device with Internet access. All of your photos are stored securely on your SQL database (behind your firewall) back at the main office where they cannot be altered, tampered with or accidentally deleted and the hyperlinks will always work because the photo's file name can't be changed. Hyperlinks may be password protected if you wish.

You're already taking the photos...let LYNX do the rest!

Join the ranks of LYNX clients who specify our application on their projects.

In order to allocate personnel, time, and resources efficiently it's imperative that you "SEE" exactly what is occurring on your projects. By requiring sub contractors to use LYNX you could see how every contractor is progressing, as well as, go back and look at any contractors work on every project from anywhere!

With LYNX all it takes is TWO mouse clicks and the photos are acquired, annotated, filed to the project, and automatically exported form the sub contractor & imported into YOUR LYNX system, where they'll be available instantly on the Web.

We'd love to show you all of these features in an online demonstration!
