To Whom It May Concern:  
Regarding: LYNX Enterprise Digital Photo Management Sole Source Document.

As the developer and distributor, we are the sole source for the LYNX Enterprise Digital Photo Management Software products. LYNX was the first software product to securely manage digital photographs for the construction industry (over 15 years), and still remains the only source for secure digital photo/media management in the construction industry. There are no other software products on the market (to our knowledge) that are designed to document construction projects with a single SECURE image/media database. LYNX was designed back in 1993 specifically for the construction industry. Because LYNX is a secure media management product it is (to our knowledge) the only such software available to the construction industry where if needed data can be used in court to prove its authenticity and integrity. (Ideal for litigation and claim support) LYNX is also the only software (to our knowledge) that securely transmits project images/media (packets) from the project site offices to the main offices automatically or manually. LYNX is the only software product (to our knowledge) that has the ability to customize and create unique search fields so that it can be tailored to fit multiple divisions within the same construction organization. LYNXPM LLC is the sole seller of LYNX Enterprise Digital Photo Management software.

Sincerely,

Julie Palella

A handwritten signature in blue ink that reads "Julie Palella".
