

Secure, Searchable, Simple!

Thank you for your interest in the LYNX Photo Management Software Program. LYNX is a high-speed, searchable, secure database for your digital photos. Please visit our website at www.lynxpm.com to see exactly how LYNX can work for you.

- How much time are you wasting trying to find, manage, and archive your photos as individual picture files that contain no information and are scattered all over the local, network, and removable drives?
- What is that time worth to you?
- Can you find them quickly and easily by using multiple search criteria and date ranges?
- Are they protected from being deleted, copied, altered or even lost?
- Can you automatically transfer your images from multiple locations across town or across the world and seamlessly synchronize your photo-data with text, voice, and mark-ups electronically over the Internet, WAN, Intranet, Network, or removable media?
- Can you cross-reference your photos if they pertain to more than one incident or application?

Well the LYNX Photo Management Software can do just that and more!!!

LYNXPM L.L.C. has been dedicated to helping our clients aggressively move towards using a secure solution to store digital media.

There are a couple of different options for the LYNX Photo Management Software Program. Attached are some configurations and pricings for you to review.

If you have any questions at all, please feel free to contact me at (877) 955-7711 ext. 83 or via E-mail at Jpalella@lynxpm.com

Sincerely,

Julie Palella
National Sales Manager

CONFIGURATIONS AND PRICING

MASTER VERSION ENTERPRISE: Install on to a server or single PC. The Master Version includes one concurrent user license and UNLIMITED project albums. This would be used with other LYNX Licenses in the field transferring photos to your Master program. The cost for the Master License is \$3,450 plus \$690 for annual Toll Free support & maintenance. Additional user licenses may be added to the Master Version for \$1,200 each plus \$240 for annual Toll Free support & maintenance.

REMOTE VERSION ENTERPRISE: Install on to a server or single PC. The Remote Version includes one concurrent user license and UNLIMITED project albums. This is the best option for inspectors, project managers and for contractor specifications. The Remote Version works just like the Master Version with one exception; it cannot create a project album. The Master Version creates the project album and has control over what information and search fields for each job you as the Master Version wants. The Master Version then sends the created job to the Remote Version. This saves time and money because all project albums will be exactly the same for packet transfers and configuring your project albums. The Remote license cost is \$1,850 plus \$370 for annual Toll Free support & maintenance. Additional user licenses may be added to the Remote Version for \$925 each plus \$185 for annual Toll Free support & maintenance.

LYNX WebServer: The LYNX WebServer software works with any of the above LYNX software version licenses. It allows you to upload images from your LYNX software to a database connected to your web server. LYNX will automatically resize images (for quick web viewing) then automatically update your web database. We do not provide web hosting. WebServer is \$5,000 for the application and then \$1,500 for annual Toll Free support & maintenance.

LYNX WebClient: The WebClient software is FREE for a limited time! Distribute this to anyone, anywhere and it allows them to connect to your LYNX WebServer database and view, search, print, etc. your project images! Like all LYNX licenses you can control what projects they can view. Normal price for WebClient is \$99 per concurrent user.

We accept all major credit cards or Purchase Orders.

Keeping current on support each year entitles you to Toll-Free telephone support and any updates to your purchased LYNX software version that may be available. It also gives you discounts off future LYNX upgrades!
