Lynx Web Application Hosting Agreements

Lynx Hosting is a service package we offer should you need hosting & hardware required for our software. We include the SQL server & database along with everything else you'll need to take advantage of the Lynx Photo Manager application.

If you ever decide to switch from Lynx hosting your media, to an in-house solution where you are hosting yourself, it is very easy to export your data from our server & import to yours.

Currently we offer five hosting plans depending on how much storage space you need. Keep in mind when choosing a hosting plan below that one of the most popular features of Lynx is the reduction in how much disk space is necessary to store your images, regardless of whether you host your own data or we host for you. Our compression feature will allow you to store up to ten times the amount of images in the same amount of disk space. (For example, a typical 5 year project with 25,000+ images would only take up around 5 gigabytes vs. the 80 gigabytes that would be required to store the same 25,000+ images without Lynx compression technology).

Below are our basic hosting plans. It is very simple & easy to migrate/upgrade from one plan to another as your needs change. Please contact us if you require something unique or different. We know everyone's needs are vary. You may have a 10 year project requiring thousands of images, or you may have thousands of projects, but fewer images on each one. Our hosting plans are all inclusive, the SQL server & database along with everything else you will need.

Economy/$480 per year	(Good startup server or smaller organizations) OS: Windows Server 2008 Standard 64-bit • RAM: 1 GB • Storage: 15 GB / Bandwidth: 500 GB/mo
